Good morning,

House Bills **5120, 5121, 5122** and **5123** aimed at superseding local authority in determining the placement and permitting of large-scale wind and solar facilities across our state are being introduced and **will be heard in the House Committee on Energy, Communications and Technology this morning at 9am.**

Please encourage our legislators that a large majority of rural residents are not in favor of having our township stripped of the authority taking away our local authority. We work hard in our community to support the residents, putting authority of this size and nature (where those making decisions do not reside) should not be allowed.

There is a place for large scale solar, any I am sure have been discussed, and it should not take valuable prime farmland.

Thank you for your time.

Cheryl Majors
